

Leica Zeno Mobile

Intuitive data capture

Leica Zeno Mobile is an Android™ app available on selected Android smartphones and tablets.

- Supports selected smartphones and tablets with Android v6.0 or higher
- Connect to Leica GNSS devices to utilise high accuracy data collection
- Simple and intuitive user interface and workflows with minimum training required
- Different versions of Zeno Mobile available depending on your needs

Interaction with Zeno Mobile is simple and intuitive, providing advanced functionality without the need for extensive training.

- Import and export data to cloud service
- Multi-touch support for easy map orientation
- Use OpenStreetMap or your own background maps instantly via WMS/WFS
- Supports wide range of GIS and CAD data formats
- Connect to HxGN SmartNet to improve GNSS measurements with Smart Positioning technology through RTK or post processing

Zeno Mobile saves you time in the field by enabling you to capture more data quicker.

- Data collection projects can be setup on the fly without the need for other software
- Upload and synchronise data with Esri ArcGIS Online and ArcGIS Enterprise
- Capture multiple features at the same time using the multi-collect function
- Connect to cable detection devices
- Stakeout tool for precision location
- Connect to laser rangefinders to measure inaccessible points

TECHNICAL SPECIFICATIONS

Standard	Project creation, data capture, complex editing, data import / export, WMS/WFS/WFS-T, Smart Positioning, Esri ArcGIS Online compatibility and more.
Professional	All standard functionality plus CAD editing/export, multi-collect, stakeout, support for cable detection devices and laser rangefinders.
User interface	Intuitive menu wheel for editing features and attribute entry. Clear and easy-to-read GNSS status bar. UI & buttons kept to a minimum to guarantee a map centric user experience.
Project management	Create projects on the fly without the need for any other software. Create projects based on an existing project to save time. Create projects in Microsoft Excel or Zeno Office using familiar tools. Rich layer management and symbolisation options. Import, edit and export CAD files directly in your device. View raster files as background maps directly within projects.
Data capture	One tap operation to capture points, lines and polygons from GNSS. Manual digitising mode for capturing data on screen. Complex feature editing including vertex addition/movement/deletion. Snapping available for existing vector data in the project. Auto fields to automatically store metadata such as GNSS accuracy, height values and more. Static point averaging for increased accuracy in difficult GNSS conditions. Streaming of points and vertices for faster data capture. GNSS accuracy limits to enhance data capture quality.
Multi-collect (professional only)	Collect more than one feature of more than one type at the same time.
Stakeout (professional only)	Pop out window to enable accurate staking out of points or polylines.
Coordinate system support	Large internal database of coordinate systems to use across the world. Supports coordinate system configuration and geoid model files as well as TRFSET formats. Download country specific geoid files from an online repository directly within the app.
RTK support	Easily create RTK and DGNSS profiles for increased accuracy. Built-in SBAS and Spot (PPP) profiles for increased accuracy without mobile data connection.
Cable Locators (professional only)	Leica Ultra, RD8100, 3M, MRT-700 and Vivax-Metrotech vLoc2-Pro, vLoc3-Pro and vLoc3-ML compatibility to measure high accuracy cable positions and store cable metadata wirelessly within Zeno Mobile.
Laser Rangefinders (professional only)	Connect to Leica DISTO and Laser Technology devices to measure inaccessible points. Supports Leica DISTO D2, X3, X4, D510, D810, S910 and Laser Technology TruPulse 360, 360R, 200X
Web Mapping Services (WMS)	Add data from WMS servers and direct access to Hexagon Imagery Program data available.
Web Feature Services (WFS & WFS-T)	Connect to WFS and WFS-T services for online and offline editing of databases
Raw data logging	Raw GNSS observations are automatically stored in projects to enable post processing.
Smart Positioning	Connect to HxGN SmartNet to improve GNSS positions over the air at the touch of a button.
Software support	Zeno Mobile projects can be directly imported to Zeno Office and Leica Infinity for post processing. Zeno Office can directly export Zeno Mobile data models for quick project creation.
Esri ArcGIS Online / Enterprise on premises support	Upload and synchronise data with your Esri ArcGIS Online/Enterprise on-premises account directly from Zeno Mobile
Cloud service	Import and export projects and data directly from Dropbox into Zeno Mobile.
File format support	SHP, ASCII, KML, DWG, DXF, GeoTIFF, TIFF, JPG, PNG, BMP
Attachment format support	Images, Video, Audio, PDF
